Cloud & DevOps Consulting Services

Transform your IT operations with our customized DevOps & Cloud solutions to reduce your costs and foster innovation.

1. CI/CD Pipeline Setup
2. Cloud Migration
3. Infrastructure as Code
4. DevOps Automation
5. Monitoring Solutions
6. DevSecOps Security Services
7. Container Orchestration
8. Cloud Cost Optimization
9. Disaster Recovery and Backup

1. CI/CD Pipeline Setup

At Pipeline Jack, we offer end-to-end CI/CD pipeline setup services tailored to your specific needs. Our comprehensive solutions include:

- **Pipeline Design and Implementation:** We design custom CI/CD pipelines that align with your development processes and goals.
- **Tool Integration:** We integrate industry-leading tools such as Jenkins, GitLab CI, GitHub Actions, and CircleCI to create a seamless and efficient pipeline.
- **Automated Testing:** We set up automated testing frameworks to ensure that your code is continuously tested for quality and performance.
- **Monitoring and Optimization:** We provide ongoing monitoring of your CI/CD pipelines to ensure they run smoothly and efficiently.

2. Cloud Migration

At Pipeline Jack, we offer end-to-end cloud migration services tailored to your specific business needs. Our comprehensive solutions include:

- **Assessment and Planning:** We conduct a thorough assessment of your existing infrastructure and applications to develop a customized migration strategy.
- **Migration Execution:** Our consultants handle the entire migration process, including data transfer, application rehosting, and configuration.
- **Optimization and Testing:** Post-migration, we optimize your cloud environment for performance, security, and cost efficiency.
- **Support and Maintenance:** We provide ongoing support and maintenance to ensure your cloud infrastructure remains secure, efficient, and up-to-date.

3. Infrastructure as Code

At Pipeline Jack, we offer end-to-end IaC services tailored to your specific needs. Our comprehensive solutions include:

- **IaC Strategy and Planning:** We assess your current infrastructure and develop a customized IaC strategy that aligns with your business goals.
- **Tool Selection and Integration:** We help you select the right IaC tools, such as Terraform, Ansible, and CloudFormation, based on your specific requirements.
- **IaC Implementation:** We implement IaC solutions that automate the provisioning, configuration, and management of your infrastructure.
- **Testing and Validation:** Rigorous testing and validation processes ensure that your IaC implementations are robust and error-free.

4. DevOps Automation

At Pipeline Jack, we offer a full range of DevOps automation services designed to meet your specific needs. Our solutions include:

- **Continuous Integration and Continuous Deployment (CI/CD):** We set up and optimize CI/CD pipelines to automate the integration and deployment of code, ensuring faster and more reliable releases.
- **Infrastructure Automation:** Using tools like Terraform, Ansible, and Puppet, we automate the provisioning and management of your infrastructure, enhancing efficiency and consistency.
- **Automated Testing:** Implement automated testing frameworks to continuously test your code for quality and performance, catching issues early in the development cycle.
- **Configuration Management:** Automate the configuration of your systems and applications to maintain consistency across environments and streamline management processes.

5. Monitoring Services

At Pipeline Jack, we offer a range of monitoring solutions tailored to your specific needs. Our comprehensive services include:

- **Infrastructure & Cloud Monitoring:** Our consultants leverage tools like CloudWatch for AWS, Azure Monitor, and Google Cloud Operations Suite to provide robust cloud monitoring.
- **Application Performance Monitoring (APM):** Our APM services track the performance of your applications, identifying bottlenecks and optimizing response times.
- **Log Management and Analysis:** We set up and manage centralized logging solutions to collect, analyze, and store log data from across your systems.
- **Security Monitoring:** Our security monitoring services detect and respond to potential security threats, protecting your systems from breaches and vulnerabilities.

6. DevSecOps Solutions

At Pipeline Jack, we offer a full range of DevSecOps services designed to integrate robust security measures into your development lifecycle. Our comprehensive solutions include:

- **Automated Security Testing:** Implement automated security testing tools to continuously scan for vulnerabilities throughout the development process.
- **Compliance and Risk Management:** Ensure continuous compliance with industry regulations such as GDPR, HIPAA, and PCI-DSS through automated compliance checks and risk management practices.
- **Security Monitoring and Incident Response:** Our incident response services include threat detection, analysis, and remediation to minimize the impact of security incidents.
- **Security Assessment:** We conduct thorough security assessments to identify vulnerabilities and develop a tailored security strategy that aligns with your business goals.

7. Container Orchestration

At Pipeline Jack, we offer a full range of container orchestration services tailored to your specific needs. Our comprehensive solutions include:

- **Platform Selection and Setup:** We help you select the right container orchestration platform, such as Kubernetes, Docker Swarm, or Red Hat OpenShift, based on your business requirements.
- **Container Management:** We provide tools and strategies for effective container management, including deployment, scaling, and updating of containers.
- **Automated Scaling and Load Balancing:** Set up load balancing to distribute traffic evenly across your containerized applications, enhancing reliability and user experience.
- **Security and Compliance:** Implement robust security practices to protect your containerized applications from threats.

8. Cloud Cost Optimization

At Pipeline Jack, we offer a full range of cloud cost optimization services tailored to your specific needs. Our comprehensive solutions include:

- **Cost Assessment and Analysis:** Conduct a thorough assessment of your current cloud infrastructure and spending.
- **Resource Optimization:** Implement strategies to right-size your cloud resources, ensuring you are not over-provisioned.
- **Automated Scaling:** Set up automated scaling policies to adjust resources based on real-time demand, preventing over-provisioning and underutilization.
- **Billing and Chargeback:** Implement billing and chargeback models to allocate costs accurately across departments or projects.

9. Disaster Recovery and Backup Services

At Pipeline Jack, we offer a full range of disaster recovery and backup services tailored to your specific needs. Our comprehensive solutions include:

- **Disaster Recovery Planning:** Develop a customized disaster recovery plan that outlines the procedures and processes to follow in the event of a disruption.
- **Data Backup Solutions:** Implement automated and secure data backup solutions to protect your critical information.
- **Recovery Testing and Validation:** Conduct regular testing and validation of your disaster recovery plan to ensure its effectiveness.
- **Business Continuity Solutions:** Develop and implement business continuity strategies to ensure that your operations can continue with minimal disruption.

Recruiting Services

Let us help you hire specialists. We find, screen, and introduce qualified and vetted candidates who are looking for part- or full-time job opportunities.

- **DevOps Engineers:** Accelerate development and operations with our expert AWS Cloud Engineers, bridging gaps for faster, more efficient delivery.
- **Cloud Engineers:** Empower your cloud strategy with skilled AWS Engineers, driving scalability, reliability, and cost savings.
- **Kubernetes Specialists:** Streamline your container management with certified Kubernetes Specialists—CKA, CKAD, CKSS—ensuring high availability and optimal performance.
- **Platform Engineers:** Build and maintain robust platforms with our Platform Engineers, ensuring security, scalability, and innovation.

DevOps - Candidate Report...
Page 2 of 6

Pipeline Jack
DevOps & Cloud Talent

- Finishing studies for Terraform certification (Associate) - 75% done

Serverless:

- They are migrating from Kubernetes to serverless (AWS and Azure)

Cloud:

- Works on Azure and AWS both

- Stronger with Azure where the biggest Kubernetes project is located

- Yes he is currently certified he has developed 2 stores as projects, he uses Key daily basis he has used for 3 years by now, Managed DB, yes he has used Mong has used just Terraform, Virtual machines w/ Linux he has been using Virtual Ma Linux for the last 15 years.

Dream job:

- He likes technical challenges.

Reason to change:

- He's not searching actively but is open to new challenges. He's reaching platea

Location: Lisbon

Relocation: He's keen to relocate to **Germany** if needed

Citizenship: Brazil

Visa: needs visa but doesn't need support (he already has it)

Permanent residency: Canada

Salary expectation: [REDACTED]

Work mode: Prefers self-employed

DevOps & Cloud Talent

Roger [REDACTED]

Candidate Report

[REDACTED] - 3rd

CKA | Cloud | Linux | Container | K8s | YAML | Gitflow | CI/CD | DevOps | Azure |

[REDACTED]

Highlights:

- Certified Kubernetes CKA
- Certified Azure
- Certified Cisco CyberOps CCNA
- Certified Scrum Master & Product Owner

DevOps seniority:

- Works in a team of 4 devops
- He considers himself as 7/10

Kubernetes:

- Certified Kubernetes admin
- He's the only one working with Kubernetes on his team
- They have 5 clusters (dev, staging, test, pre-prod, prod) and he manages all of them. First, they were setup without IaC (legacy) and he's managing them.
- He has 5 years of experience using Kubernetes cluster since he was at the army

Terraform:

- He considers himself as 7/10 => on serverless AWS (not Kubernetes)
